GEA

Fun Experience

FUN SPECIALIST

We have created new experiences since 1990, at every altitude, in every season, outdoors or indoors.

Space where children and youngsters, young and not so young, can have fun in absolute safety, spend exciting moments together while enjoying the activities they love and discovering new ones. We create space where to play, practice sports, and live together in an active way

Healthy fun helps us grow - each experience is enriched for anyone and at any age. Each of our products is primarily an emotion that goes beyond just fun and must guarantee joy and learning opportunities. When we create fun experiences, our proposals always have a threefold value: recreational, educational and economic sustainability. A fun place, even the smallest, does not the sum of many "games" - it derives from a coherent

idea and the need to achieve a precise goal. Hence, we are first and foremost consultants, together with our customers we explore wishes and needs; we are then designers, we study the maps and the orography of the territory to understand which slopes and orientations to exploit and we design the best solutions. The individual product is only selected at the end.

SLOPE EXPERIENCES

For GEA, descent is safe improvement and adrenaline. Slope animation enjoy the user to repeat the path and engages them repeatedly. It intrigues, creates novelties and adds character and uniqueness to the area.

With our projects, we are able to create temporary or permanent installations (on a lawn or on a snow-covered track) that allow you to experience speed, driving and playtime emotions in autonomously and favouring the process of growth and improvement in the sport. We work in all seasons, on different gradients, widths and lengths. Grassy hills or snow-covered tracks. The pleasure is the same. In the winter, we set up arrangements with obstacles suitable for beginners and more experienced skiers. Elements that can characterise the tracks, creating greater interaction

and increasing the number of passageways. Large and customisable dimensions, which flex and rotate and can be combined with tunnels, parabolic curves, spirals and jumps. Or smaller ones, for educational paths in school fields and to learn the basic skiing movements through play. In the summer, we recreate the same emotions on slopes with natural and synthetic grass and dirt tracks, with descent means ideal to entertain families. Young people and adults can share playtime and sports experiences by means of snow tubing, using bobs, special bikes and mini karts.

ACTIVEPARK

LEVEL EXPERIENCES

For Gea, experience in flat levels means socialisation in respect of nature. We design and set up integrated parks in the context and compliant with the environment, in all seasons and climatic conditions. For us, every open space has the potential to become a unique place, ideal for having fun, to play, practice sports and be together.

We can offer fun experiences on the snow or on grassy land.

We study the space according to the maximum usability and for an active role of those who enjoy them; young kids will learn by playing with new stimuli, youngsters and adults can exercise, train or compare with others by means of activities that are rich in emotions.

We propose winning solutions for every type of user in summer and winter, to create a play area or an interesting recreational space for youngsters as well as adults. Play facilities,

adventure and mountain bike trails, wellness trails and open air gyms. In winter, kindergarten on the snow with weatherproof products. Nature parks where space is organised to offer growth experiences, where to enjoy physical activity and have fun while learning; all with modern, interactive and design materials. Each product is specially designed to allow absolute safe use, certified according to the regulations in force and to ensure a qualitative result at the highest levels on the market.

★ MTB

SKILL PARK

To learn how to ride a bicycle in the best possible way, to be able to manage sudden situations, various and rough terrain types and different inclinations. It is necessary to experiment in a controlled context many driving situations that are difficult to encounter on a city street or on the cycle path.

The skill parks are born with this goal: to improve the bike driving technique. The skill parks are mainly used for educational purposes, in playgrounds and bike schools or positioned within Trail Centers and sports areas to refine your technique, improve your performance and progress in training. Create the perfect mountain bike trail for you and suitable for the available park thanks

to the modular design of our platforms. Natural obstacles are often not enough to create truly valid and fun Bike Parks and Trail Centers. To introduce participants to the sport of biking in a simple and technical way, to hone their driving skills before tackling the routes in a natural environment, the Skill Course is the perfect choice.
